NC Registry for Brain Health

Connecting NC to Research and Resources to Prevent and Treat Memory Disorders

Join the Registry at www.ncbrainhealth.org

About the NC Registry for Brain Health

The NC Registry for Brain Health is the first of its kind in the state of North Carolina. The Registry is designed to increase awareness of Alzheimer's disease and related disorders and to connect North Carolinians of all ages to research opportunities designed to improve brain health.

When you join the NC Registry for Brain Health, you will learn about research taking place at Duke University, East Carolina University, North Carolina A&T State University, the University of North Carolina at Chapel Hill and Wake Forest School of Medicine.

The Value of the Registry

Memory disorders are common and affect people of all backgrounds. The Registry is open to all adults from across the state to help us better understand the full impact of these disorders.

Alzheimer's disease is the 5th leading cause of death in North Carolina. Joining the Registry will help medical scientists understand the causes of Alzheimer's disease and related conditions to find treatments for these conditions.

Alzheimer's disease and other dementias begin in the brain years before symptoms are present. By including young people (18 years or older) in the Registry, we can better understand the earliest signs of disease before symptoms appear and develop ways to prevent these diseases.

What We Do

The NC Consortium for Brain Health in Aging created the NC Registry by bringing together local brain health experts from five partnering organizations across the state.

These Research Partners work together to:

- Connect North Carolina residents with research going on around the state to understand and improve brain health.
- Host outreach events across the state to increase awareness about Alzheimer's disease and other dementias.
- Publicize resources available in communities across North Carolina to help people with memory disorders and their families.
